LinkedIn profile: linkedin.com/in/öznurmeydan

PROFESSIONAL SUMMARY

Industrial Engineering student with hands-on experience in production, operations, and business development through internships and academic projects. Skilled in data analysis, simulation, and process optimization using Python, MATLAB, and Excel. Gained cross-functional insight across production, sales, and business development functions. Passionate about improving efficiency in manufacturing and logistics systems.

EDUCATION

Industrial Engineering (English) – Hacettepe University

4th year industrial engineering student

CORE COMPETENCIES

Data Analysis with Python, Simulation Modeling, Production Planning & Facility Layout, Basic Machine Learning Applications, CAD & 3D Design**,** UI Design**,** Team Collaboration & Reporting, Problem Solving & Adaptability

Tools: Python, MATLAB, Excel, Solidworks, Power BI, Figma, Arena, SAP, Minitab, R

EXPERIENCES

Business Development Intern (Candidate Engineer) – Enerjisa Eşarj | Ankara, October 2025 – Present
Supporting data-driven decision-making in EV charging infrastructure through market analysis, performance tracking, and strategic evaluations. Contributing to reports that support growth, partnerships, and operational efficiency.

Production & Sales Intern – *Eltaş Transformatör A.Ş.* | Izmir, 2023
Completed a two-month rotation in production and sales. Gained hands-on insight into transformer manufacturing, workflow efficiency, quality control, and customer-oriented sales processes.

Research Support Intern – *Magiçe Design & Technology.* **|** Ankara, 2023
Provided research and analysis support for design and technology-focused projects. Contributed to data collection, reporting, and project development processes.

CERTIFICATES

- **Case Study Competiton Winner (1st Place) – Renault Solvex |** Ankara, 2025
  Awarded first place in a Renault-organized case study competition by developing and presenting a data-driven solution to a real-world business problem. Demonstrated strong analytical thinking, problem-solving skills, and effective teamwork.
- **Python for Data Science – IBM SkillsBuild**
- **Python for Machine Learning – Global AI Hub**
- **First Step to Artificial Intelligence – Global AI Hub**
- **Young Executive Academy – Go Company**

PROJECTS

Founder – Re-Brick *(2023-2024)*

Developed a startup concept transforming construction waste into standardized bricks. Collaborated with Özyeğin University for a TÜBİTAK BİGG funding application and presented the project at competetions in Ankara and Istanbul, receiving proffesional feedback.

Research Project – Space Logistics Optimization (TÜBİTAK) (2025–Present)

I am involved in a TÜBİTAK research project in the field of space logistics. The project focuses on analyzing and modeling complex logistics systems related to space operations, including scenario-based analysis, system efficiency evaluation, and decision-support approaches using engineering and analytical methods..

Demand-Forecast-Driven Hybrid Heuristic Optimization for Visit Frequency and Routing Decisions in Nationwide Spare Parts Distribution (*Graduation Project – Renault MAİS) (2025-2026)*

Working on demand-forecast-driven hybrid heuristic optimization for visit frequency and routing decisions in nationwide spare parts distribution. Applying data analysis and optimization methods to improve efficiency in real-world automotive logistics systems.
